

# DST & HYDROFRAC PACKER

## HYDRO-FRAC PACKERS

Hydro-Fracturing is a method of stimulating and improving the yield of a water well by opening and flushing out previously closed fractures with high pressure water.

AGE Developments manufacture a range of high-pressure inflatable packers suitable for Hydro-Fracturing, stress testing and similar applications.

Standard sizes are available for wells from 30mm (1") to 200mm (8") diameter with pressure rating up to 700 Bar (10,000psi).

As with all AGE products, special sizes, materials and pressure ratings are available on request and equipment is typically available for sale, rental or for use in conjunction with one of our highly trained staff. Contact us for more information.

## WATER WELL DRILL STEM TESTING (DST)

Water well Drill Stem Testing (DST) is a method of selectively surveying isolated portions of a well in order to determine the water quality from each level separately before the well is completed.

Such information can be used to determine which of a range of aquifers may be used for production and which should be isolated from production.

AGE supply a broad range of open and cased-hole straddle packer assemblies and associated equipment for use in such DST work.

This can include pumping equipment, either airlift or electric submersible and is available for sale, rental or for use in conjunction with one of our highly trained staff. Contact us for more information.

AGE Developments Pty. Ltd. is a Perth based company dedicated to servicing the onshore, offshore **water**, oil, gas, mining and geotechnical investigation industries. The company was founded by **Adriano Giacomel** on the *philosophy* of providing a complete **design, manufacturing and operating service** available **24 hours** a day, **7 days a week**.

**water . oil . gas . mining . geotechnical**
